

## **What is Dinair Airbrush Tanning?**

This revolutionary treatment is a safe alternative to obtaining a golden glow all year round without causing damage to your skin by sun tanning or using tanning beds. The airbrush tanning system in its simplest form is the distributing of a tan color to the skin utilizing air compressors and an airbrush delivery system. Airbrush tanning, a treatment once exclusive to celebrities, is free from harmful UV rays and will produce an even, natural-looking tan! This technique eliminates the occurrence of streaks, blotches and orange color, normally associated with self-tanners and spray booths, providing a seamless and flawless tan. Airbrush Tanning is the only sunless tanning option that offers a personalized and customized service giving each client a remarkable tan that not only compliments their physical attributes but also adheres to their personal preferences.

## **How Does it Work?**

The compressor forces air out through the end of an airbrush which holds the solution in a separate chamber. As the air rushes past it collects small quantities of the solution which are then deposited onto the skin. The active ingredient is dihydroxyacetone (DHA) and airbrushing solutions also contain a further external bronzer which begins to show immediately as soon as they have been sprayed. This aids the application as the areas that have already been treated are visible. Therefore the initial color of the skin is determined by the formulation of the bronzer used.

## **What is DHA and is it safe?**

(DHA) is a simple three-carbon sugar which is derived from a vegetable source, non toxic in nature. The active ingredient DHA, has been FDA approved for 30 years and has no allergic reports. Its use as tanning solution originates from raw sugar cane and fermentation of glycerin and comes in a form of a white powder. After a session all the action and reactions occur at the epidermis level, where the skin cells are dead. DHA once applied reacts with the amino acids contained in the dead skin cells to give rise to the brown pigment called melanoidin. The DHA reacts with the amino acids in the outer layers (epidermis) of your skin. The reaction develops a beautiful golden tan and will look natural and fade naturally as if it came from the sun. It is UV-free, 100% all natural, and healthy.

## **How long does a tanning session take?**

One session takes about 15-20 minutes for the solution to be applied over the entire body and the solution dries almost instantly and develops over a period of 6-8 hours. Two sessions are recommended to build a base tan depending on your skin type and color.

## **How long will my airbrush tan last?**

Your tan can last up to 8 days or longer depending on your activities, skin type and how you take care of your skin. Your tan will gradually fade as your skin naturally exfoliates. With follow-up applications, you can maintain your tan indefinitely.

## **How do I prepare for my session?**

For optimal results: Shower or bathe and exfoliate before your session. Make sure your skin is

free of perfumes, lotions, oils, deodorants or any product on the skin that would create a barrier. Do not use deodorant or perfume prior to airbrush tanning. Your skin must be completely clean & dry. Shaving should also be done the night before tanning (not after tanning). Do not suntan within 4 days after waxing. Wax residue will block tanner absorption. Remove all jewelry. To maintain your tan, moisturize the following day and then frequently to prolong your tan.

LuLu's the Salon & Day Spa offers the Salt Glow as an exfoliating spa treatment. Dead sea salts custom blended with stimulating pure plant oils is massaged all over the body to gently exfoliate the skin. A refreshing shower follows the polish, followed by an application of moisturizing lotion. In less than an hour the skin is left feeling refined and totally invigorated.

### **What Do I Wear to my airbrush tanning session?**

You can wear your undergarments or a swimsuit just as you would at the beach. Or you may wish to eliminate tan lines completely. Men are required to wear an undergarment. We offer a variety of disposables for men and women including tops.

### **What should I do after my tanning session?**

Wear loose fitting clothes and shoes (preferably dark colored items) to put on after your tanning session so the solution does not rub off before it has time to set. It is suggested to wait up to 5 hours after application to swim, shower, wash or take part in vigorous exercise (the longer the better) in order to allow the solution to completely react and form its golden brown color. Use an alcohol free moisturizer afterwards to preserve your tan, always use sunscreen.

### **Please walk me through a session :**

When you arrive at LuLu's you will step into a private room and undress. You may wear a pair of disposable spa panties, your own underwear or nothing at all. If you chose to wear your own underwear or swim suit we recommend bringing something black to ensure it will not be discolored by the self tanning product.

An experienced airbrush technician will ask you the kind of color you are hoping to achieve--from a healthy glow, to a light, medium or dark tan. Then, assessing your natural skin color she will tell you if your goal is realistic or what she would suggest. For example--if a pale ivory skinned person wanted to be really dark it would not be recommended-- however we would still be able to create a strong medium tan.

We will do our utmost to listen to your preferences.

Your nails will be gently covered with lotion to prevent discoloration (this protects your manicure and keeps cuticles clean--it peels right off afterwards.)

If your hair is very pale we may use a shower cap however we are very accurate where we spray and we like to get right into the hairline.

You will stand on a towel (no dirty feet!) while the technician has you turn in different positions and sprays you.

We use an advanced turbine system and hypo allergenic tanning solution. There is citrus smell,

and you will feel a cool misting sensation. It takes just a couple of minutes to be sprayed.

Your technician will place a fan in place for you to dry and turn on the timer.

After a few minutes, when the timer goes, you may put your clothes back on. We suggest wearing something loose and dark not jeans. We say no jeans as denim can be very absorbent and absorbs the product off the skin.

For ladies we suggest no bra straight afterwards as it can cut into the tan.

Our solution is tinted so when you leave you will already have a pleasantly tanned look. A little of that color can rub off on the inside of your clothes. It will not stain with the exception of nylon and leather. So--if you are driving home in the summer you might want to bring a towel to protect leather car seats.

If you are a busy exec that's "on the go", we can use clear solution on you.

After 12 hours you will take a shower. You will see a tea color running off you--do not be alarmed, this is not the tan washing off, this is merely the tint that the technician used as a color guide, it has to come off, don't worry. Only use soap where necessary and bear in mind that shaving causes the tan to fade quicker.

The resulting color will be very natural--don't be alarmed if it looks too dark before you shower. The first time you come to us it is best to wait twelve hours before showering. You will get a good self tanning effect even if you shower after four hours but for the best effect wait twelve hours.

If you go to sleep before showering you might get a little color on the sheets--it will wash out. We recommend putting on loose fitting cotton socks on your hands to sleep. This may sound silly but it will stop you from inadvertently touching yourself in the night and getting self tanner on the palms of your hands.
